Key figures

In 2016, the European economy’s slow recovery was marked by a heightened uncertainty in the political landscape, thereby raising tensions in financial markets. In this context, the CEB achieved record highs in its business activity objectives while maintaining a sound financial performance.

### Activity Highlights

In the third and final year of the Development Plan 2014-2016, the CEB achieved or exceeded its business activity objectives: projects approved amounted to € 3.5 billion (+50.0%), disbursements increased to € 2.0 billion (+10.5%), the stock of projects reached € 5.7 billion (+19.7%) and loans outstanding rose to € 13.7 billion (+4.9%).

In 2016, total new borrowings with maturities of more than one year amounted to € 3.1 billion compared to € 3.0 billion in 2015. Six issues were launched in 2016 (same as in 2015) under the annual borrowing authorisation of € 3.3 billion (€ 4.6 billion for 2015).

Overall, 43% of the funds raised by the Bank were denominated in US Dollar, 40% in Euro and 17% in GB Pound.

All funding operations launched in 2016 were hedged to reduce both interest rate risk and foreign exchange risk. After taking swaps into account, all the resources borrowed were denominated in euros.

### Financial Performance

#### 1. Balance Sheet

At 31 December 2016, total assets amounted to € 25 603 million versus € 25 116 million at 31 December 2015, i.e. an increase of 1.9%.

**Assets**

- **Outstanding loans** reached € 13 715 million at the end of 2016, a 4.9% increase compared to € 13 072 million at the end of 2015. Disbursements totalled € 2 037 million, increasing by 10.6%. At the same time, repayments for 2016 amounted to € 1 376 million (€ 1 388 million in 2015).

At the end of 2016, **treasury assets** amounted to € 6 632 million, an increase of 4.6% compared to the end of 2015 (€ 6 342 million).

- **Held-to-maturity financial assets** declined by 8.3% from € 2 670 million at the end of 2015 to € 2 448 million at the end of 2016 due to reimbursements at maturity and no new acquisitions since February 2015 related to the low interest rate environment.
Liabilities

Borrowings and debt securities in issue (including accruals) increased by 2.7% from €19,630 million at the end of 2015 to €20,157 million at the end of 2016, mainly due to issues with maturities of one year or more (at trade date) totalling €20,063 million at the end of 2016 versus €19,530 million at the end of 2015, reflecting new issues amounting to €3,137 million, or 95% of the annual borrowing authorisation for 2016, and reimbursements of €3,670 million.

Other liabilities decreased mainly due to cash deposits related to collateral agreements, which amounted to €1,379 million at the end of 2016 compared to €1,688 million at the end of 2015, i.e. minus 18.3%.

Provisions increased by €6 million, i.e. +2.7%, from €227 million at the end of 2015 to €233 million at the end of 2016, resulting mainly from the provisions for post-employment benefits.

Equity, including net profit for 2016 (after allocation), amounted to €2,812 million at the end of 2016 compared with €2,712 million at the end of the previous year. This increase of €100 million, i.e. 3.7%, was due to:

- the allocation of €120.0 million of the 2015 net profit to the general reserve
- the allocation of €7.0 million of the 2015 net profit to the Social Dividend Account
- 2016 net profit of €104.9 million
- the change in gains or losses recognised directly in equity, i.e. +€2.5 million, mainly related to the update of key assumptions in the actuarial liabilities and partially offset by the change of market value of the available-for-sale financial assets.

Finally, the balance sheet showed a variation in the derivative items (financial assets or liabilities at fair value through profit or loss and hedging derivative instruments) of minus €262 million, i.e. minus 9.9%, on the assets side and + €205 million, i.e. +30.6%, on the liabilities side, respectively. These items represent the fair value, either positive (assets) or negative (liabilities), of the derivatives instruments (currency exchange and interest rate contracts) used for hedging purposes on loans, available-for-sale assets and debt securities in issue.

2. Income Statement

In a continuously difficult economic and financial environment in Europe, characterised by historically low interest rates, the CEB reached a net profit of €104.9 million in 2016, a decrease of 17.4% compared to €127.0 million in 2015, mainly due to the decrease in net banking income of €21.5 million, i.e. minus 12.3%, whose main drivers were:

- the negative variation of €6.8 million in the net interest margin due to the lower return on the held-to-maturity portfolio related to lower interest rates and reduced volume; and
- the negative valuation of financial instruments (IFRS volatility effects) of €6.1 million in 2016 compared to a positive valuation of €8.7 million in 2015, due to the decrease in the currency basis spread between the euro and the zloty.

General operating expenses (including depreciation) amounted to €48.6 million in 2016, stable compared to €47.9 million in 2015. The cost-to-income ratio increased significantly from 27.4% in 2015 to 31.7% in 2016.

Core earnings (excluding material one-off effects and exceptional gains and losses) amounted to €118.3 million in 2015, i.e. a decrease of 6.2%. The adjusted cost-to-income ratio increased moderately from 28.5% in 2015 to 30.1% in 2016.

In conclusion, the CEB’s financial performance in 2016 was the result of its strong capacity to face a challenging financial environment backed by its prudent financial and risk management policy. Furthermore, as in previous years, no arrears or impairments were recorded in 2016. Net profit was allocated in full to the Bank’s reserves in order to further strengthen its capital base.
3. Key Ratios and Ratings

In 2016, the Administrative Council approved the new Financial & Risk Policy with the purpose of addressing challenges arising from the profound economic, financial and regulatory changes. While preserving a prudent approach, the new policy introduces a balance sheet management approach to optimise the use of the Bank's financial resources, allow greater flexibility in interest rate management, and, at the same time, maintain a strong liquidity position. Against this background, the ratios of the prudential framework have been adjusted of which the key changes concern the interest rate risk through a balance sheet approach, the liquidity risk with a liquidity curve approach and the credit risk with the internal rating becoming the reference for the treasury activity.

The ratios and indicators are organised around six main areas: capital, leverage, liquidity, market credit risk, interest rate risk and foreign exchange rate risk. All of the CEB's prudential framework ratios remained within their limits in 2016:

- **Capital Adequacy** (limit: > 10.5%) increased slightly from 26.3% in 2015 to 26.7% in 2016, i.e. +1.5%
- **Leverage** increased slightly with the **Indebtedness Ratio** (limit reviewed from < 12 to < 10) from 6.17 in 2015 to 6.30 in 2016, i.e. + 2.1 owing to the stable balance sheet and gradually increasing equity
- **Liquidity**
  - the **Short-Term Liquidity Ratio** (limit: > 100%) remained well above its limit with 153% for the one-year period in 2016 compared with 138% in 2015
  - the **Self Sufficiency Period Ratio** (limit: > 6 months) reached 14 months in 2016, therefore well above its limit
- **Market Credit Risk**: Minimum Internal Rating (limits: ≥ 7.0 (A-) for short-term investments; ≥ 8.0 (A+) for long-term investments): no counterparties/transactions were below the defined limit in 2016
- **Interest Rate Risk**: the **Economic Value Sensitivity** (limit: < 0.5% of own funds) was minus € 8.8 million in 2016 for a limit of € 15.5 million of own funds
- **Foreign Exchange Rate Risk**: the **Spot Net Open Position** (limit in absolute value: < € 1 million per currency) was below the limit in each currency in 2016.

The international rating agencies Moody’s, Standard & Poor’s and Fitch Ratings, confirmed their excellent ratings of the CEB at Aa1/AA+, outlook stable. All three agencies highlighted the CEB’s strong shareholder support, conservative risk management and prudent liquidity policy.

Financial statements
Prepared in compliance with IFRS adopted by the European Union

The Bank’s objectives

“The primary purpose of the Bank is to help in solving the social problems with which European countries are or may be faced as a result of the presence of refugees, displaced persons or migrants consequent upon movements of refugees or other forced movements of populations and as a result of the presence of victims of natural or ecological disasters.

The investment projects to which the Bank contributes may be intended either to help such people in the country in which they find themselves or to enable them to return to their countries of origin when the conditions for return are met or, where applicable, to settle in another host country. These projects must be approved by a member of the Bank.

The Bank may also contribute to the realisation of investment projects approved by a member of the Bank which enable jobs to be created in disadvantaged regions, people in low income groups to be housed or social infrastructure to be created*.

(Articles of Agreement, Article II).

Sectors of action

The Council of Europe Development Bank (CEB) contributes to the implementation of socially-orientated investment projects in favour of social cohesion through four major sectoral lines of action, namely the strengthening of social integration, management of the environment, supporting public infrastructure with a social vocation and supporting micro, small and medium-size enterprises.

Its actions comply with eligibility criteria specific to each sectoral line of action, thus reflecting not only the CEB’s specific social vocation, but also the development logic underpinning all its activity.

In accordance with Administrative Council Resolution 1562 (2013), each of these four action lines involves the following fields:

- **Strengthening of social integration**
  To contribute to strengthening social integration and thus to attack the roots of exclusion means, at an operational level, acting in favour of refugees, migrants and displaced persons, promoting social housing and improving living conditions in urban and rural areas.

- **Management of the environment**
  To contribute to managing the environment means not only systematically responding to emergency situations in the event of natural or ecological disasters, but also promoting protection of the environment and preservation of historic and cultural heritage.

- **Supporting public infrastructure with a social vocation**
  To support the development of public infrastructure with a social vocation in the key sectors of health, education, vocational training and administrative and judicial public services in the long term facilitates more dynamic and more equitable economic and social growth, promoting individual fulfilment and collective well-being.

- **Supporting micro-, small and medium sized enterprises**
  The CEB finances micro, small and medium-sized enterprises (MSMEs) for the prime purpose of promoting the creation and preservation of viable jobs by facilitating access to credit. Such loans are also aimed at entities exercising craft activities or family enterprises engaged in regular economic activity.

NOTES TO THE FINANCIAL STATEMENTS

NOTE A - Summary of principal accounting methods applied by the Bank

1. Accounting standards

1.1 Applicable accounting standards
The Bank's separate accounts are prepared in accordance with International Financial Reporting Standards (IFRS) as adopted by the European Union. In this regard, certain provisions of IAS 39 relating to hedge accounting have been excluded.

The entry into force of standards with mandatory application after 1 January 2016 had no impact on the financial statements as at 31 December 2016. The Bank did not implement new standards, amendments or interpretations adopted by the European Union for which implementation was optional in 2016.

1.2 Accounting standards issued but not yet effective
The IASB has published new standards, interpretations and amendments, not all of which were adopted by the European Union as of 31 December 2016. The CEB is concerned with the following standards:

IFRS 9 "Financial Instruments"
IFRS 9 represent a revision of IAS 39. IFRS 9 defines new principles for the classification and measurement of financial instruments, introduces a new methodology for the impairment of credit risks of financial assets and revises the treatment of hedging operations, with the exception of macro-hedging operations for which a separate draft standard is currently being considered by the IASB.

IFRS 9 was adopted by the European Union on 22 November 2016 and is applicable as from 1 January 2018.

The CEB has set up a project committee in charge of the different aspects of the standard. This committee brings together the heads of the Risk & Control and Information Technology departments. The analysis of the three parts of the standard is currently being finalised. Necessary developments and adaptations of the Bank's information systems were carried out in 2016 and will be finalised in 2017.

At this stage of the project, the quantitative consequences of the application of this standard cannot yet be estimated.

IFRS 15 "Revenue from Contracts with Customers"
This standard defines the revenue recognition principles applicable to all contracts with customers, with the exception of leases, insurance contracts, financial instruments and guarantees. The analysis of the standard and its effects is ongoing. The CEB does not anticipate the application of this standard to have a significant impact.

IFRS 15 was adopted by the European Union on 22 September 2016 and is applicable as from 1 January 2018.

1.3 Use of estimates
Within the context of IFRS application, the main area requiring judgment and value assessment relates to credit risk. Except for these aspects, the CEB's nature of operations do not necessitate, in terms of judgement and valuation complexity, significant estimates or defining assumptions in preparing its financial statements. However, economic and demographic assumptions are used to value the post-employment social commitments.

The financial statements have been prepared on the historical cost basis, except for certain financial assets and liabilities, which are accounted for at fair value. The main accounting principles applied by the CEB are summarised below.
2. Financial assets and liabilities

2.1 Foreign currency transactions
The financial statements are presented in euros.

Monetary assets and liabilities denominated in foreign currencies are translated into euros (CEB's functional currency) at the exchange rate applicable at the end-date of the accounting period. Exchange variations resulting from this translation are accounted for in the income statement.

Forward currency transactions are valued at market value by using the forward exchange rate applicable for the remaining period for the currency concerned. Spot exchange positions are valued at the spot exchange rate at the end of the accounting period. The resulting exchange differences are recorded in the income statement.

2.2 Loans and advances to credit institutions and to customers
The category "Loans and advances to credit institutions and to customers" consists of non-derivative financial assets with fixed or determinable payments non-quoted on an active market and that are not held for trading, neither intended to be sold when granted.

The item "Loans" under the category "Loans and advances to credit institutions and to customers" includes loans granted by the Bank.

The item "Advances" under category "Loans and advances to credit institutions and to customers" consists of interbank advances granted by the CEB and advances repayable on demand with credit institutions (except central banks). These allow settling and receiving payments from financial transactions related to its activities.

Loans given out by the Bank are first recorded at their market value which in general is the equivalent of the net amount initially disbursed.

Thereafter, loans are valued at amortised cost and interest is calculated on the basis of the global effective interest rate method. Financing commitments are recorded in the off-balance sheet for the amount not yet disbursed.

In application of IAS 39, within the ambit of fair value hedge transactions, the loan book value is adjusted for the profits or losses relative to the hedged risk.

2.3 Securities
Securities held by the Bank are classified under two categories:

- Financial assets held to maturity
The category "Financial assets held to maturity" includes securities at fixed income and fixed maturity that the Bank has the intention and ability to hold to maturity.

Securities classified under this category are accounted for after acquisition, at amortised cost in accordance with the effective interest rate method, which includes the amortisation of the premium or discount equivalent to the difference between their purchase price and their reimbursement value.

Income from these securities is recorded under the heading "Interest and similar income" in the income statement.

- Available-for-sale financial assets
The "Available-for-sale financial assets" category includes fixed income or variable-yield securities which do not fall under the previous category.

Securities under this category are initially valued at their market value inclusive of transaction charges. At end-date, securities are valued at their market value, and whose variations, exclusive of accrued income are presented under a specific heading in equity "Gains or losses recognised directly in equity", except for securities covered by a fair value hedge. In such case, the profits and losses relative to hedged risks are recorded in the income statement under the same heading as the changes in value of hedging instrument, in conformity with IAS 39.

At disposal, maturity or depreciation of the securities (in cases of a significant or prolonged decline in the fair value below the cost), these deferred gains or losses, previously recorded under equity, are accounted for in the income statement under the heading "Net gains or losses from available-for-sale financial assets".

Income from fixed income securities under this category, which is accounted for on the basis of the effective interest rate method, is presented under the heading "Interest and similar income" in the income statement. Dividends received from variable-rate securities are recorded under the aggregate "Net gains or losses from available-for-sale financial assets".
Notes to the financial statements

**NOTE A**

### Date and accounting criteria
Securities classified under the two categories above are recorded at the trade date.

### 2.4 Depreciation of financial assets, financing and guaranty commitments

#### Financial assets valued at amortised cost
Depreciation of loans and financial assets held to maturity is accounted for when there is an objective indication of a measurable loss in value following an event that occurred after loan approval or security purchase.

Any observable data being related to the following events represents an objective indication of a loss in value:
- the existence of at least a three month unpaid amount
- awareness or observation of significant financial difficulties of the counterparty leading to the conclusion of a proven existing risk, whether an unpaid amount has been noted or not
- the concessions yielded with the terms of the loans, which would not have been granted without financial difficulties of the borrower.

The amount of depreciation is equivalent to the difference between the book value of the asset and the present value of estimated future recoverable cash flows, taking into account guaranties, discounted at the financial asset's original effective interest rate. Changes in value of such depreciated assets are recorded under the heading "Cost of risk" in the income statement.

After the asset depreciation, a theoretical revenue from the asset's net book value, calculated on the basis of the original effective interest rate used for discounting the estimated recoverable cash flows, is recorded in the income statement under the heading "Interest and similar income". Loan depreciation is recorded in a separate provision account, thus reducing its original value recorded under assets.

The impairment relating to financing and guaranty commitments follows similar principles and are recorded under liabilities.

#### Available-for-sale financial assets
At the CEB, "Available-for-sale financial assets", mainly composed of fixed income securities, are depreciated on an individual basis by counterparty of income statement in case of an objective indication of durable depreciation resulting from one or more events subsequent to the purchase.

Criteria for depreciation of these securities are similar to those applied for depreciation of financial assets valued at amortised cost.

A depreciation of a fixed income security is recorded under the income statement heading "Cost of risk" and may be released in case of subsequent improvement of security.

### 2.5 Debt securities in issue
Securities issued by the CEB qualify as debt instruments by reason of a contractual obligation for the Bank to settle with their holder.

Debt securities in issue are initially recorded at their issuance value inclusive of transaction charges and are subsequently valued at their amortised cost by using the effective interest rate method.

In application of IAS 39, within the ambit of fair value hedge transactions, the book value of issues is adjusted for the profits or losses relative to the hedged risk.

### 2.6 Derivative instruments
All derivative instruments are accounted for in the balance sheet at trade date, at their fair value. At end-date, they are revalued at their market value.

Derivatives are classified under two categories:

#### Transaction derivatives
Derivative instruments are by default considered to be transaction instruments, except if they can qualify as hedging instruments. They are recorded in the balance sheet under the heading "Financial assets at fair value through profit or loss" in cases of positive market value and under the heading "Financial liabilities at fair value through profit or loss" when the market value is negative. Profits or losses are recorded in the income statement under the heading "Net gains or losses from financial instruments at fair value through profit or loss".
Notes to the financial statements

NOTE A

Derivatives and hedge accounting

Fair value hedge is used by the Bank to cover namely the interest rate risk of assets and liabilities with fixed interest rate, for identified financial instruments (loans, available for sale assets, issues, borrowings).

In order to qualify a financial instrument as hedging derivative, the Bank keeps information on the hedge from its initial application. This information specifies the designated asset or liability, the hedged risk, the type of derivative instrument used and the evaluation method which will be employed in assessing the retrospective and prospective effectiveness of the hedge.

The derivative instrument designated as hedge has to be highly effective in order to compensate for the value variations resulting from the hedged risk; this effectiveness has to be ensured from the hedging’s initial application and subsequently throughout its life.

In the case of fair value hedge relationship, derivatives are revalued in the balance sheet at their fair value, whilst fair value variations are recorded in the income statement under the heading “Net gains or losses from financial instruments at fair value through profit or loss”, symmetrically to the revaluation of the instruments hedged for the estimated risk. In the balance sheet, in the case of hedging relationship of identified assets or liabilities, revaluation of the hedged item is accounted for in conformity with the classification of the instrument hedged. The impact recorded in the income statement represents the eventual ineffectiveness of the hedge.

In cases where a hedge is interrupted or it no longer satisfies the effectiveness tests, hedging derivatives are transferred to the trading portfolio and accounted for in accordance with the principles applicable to this category. In the case of interest rate instruments initially identified as hedged, the revaluation amount with respect to these instruments recorded in the balance sheet is amortised at the effective interest rate for its residual life duration. If the hedged items no longer figure in the balance sheet, particularly due to early redemption, this amount is immediately transferred to income statement.

2.7 Fair value assessment

The fair value of financial assets and liabilities is composed of their market values and additional value adjustments as required by IFRS 13.

Market value

The financial assets and liabilities under categories “Financial instruments at fair value through profit or loss”, “Hedging derivative instruments” and “Available-for-sale financial assets” are valued and recorded at their market value. The market value is equivalent to the amount for which an asset could be exchanged, or a liability settled, between knowledgeable, willing parties in an arm’s length transaction.

Market value is determined as follows:

- using quoted prices in an active market;
- applying a valuation technique incorporating:
  - mathematical calculation methods based on recognised financial assumptions, and
  - parameters whose value is determined either by using prices of instruments traded in active markets, or based on statistical estimates or other quantitative methods in the absence of an active market.

On the other hand, derivative instruments (foreign exchange, interest rate and currency swaps) are valued on the basis of models commonly accepted (discounted cash flow method, Black and Scholes model, interpolation techniques) by using observable parameters.

Value adjustments

The valuation adjustments allow integration of the counterparty credit risk and of the Bank’s own credit risk within the fair value.

Value adjustment for the risk of the counterparty (Credit Valuation Adjustment – CVA) reflects the risk for the Bank not to recover the full market value of its transactions, in case of default of one of its counterparties.

Value adjustment for own credit risk (Own Credit Adjustment - OCA and Debit Valuation Adjustment – DVA) represents the effect of the CEB’s credit risk on valuation of its debt securities in issue and derivative financial liabilities.

These adjustments are calculated counterparty by counterparty and are based on the estimates of default exposures, probabilities of default and recovery rates in case of default.

The exposure at default is estimated using a model that quantifies the exposure at risk from the simulation of risk factors. For the CVA, the model takes into account collateral movements and their frequency. For the DVA, the model estimates a non-collateralised exposure except for counterparties with a bilateral collateralisation in case of downgrade of the CEB.

The CVA and DVA are recorded under the heading “Financial assets at fair value through profit or loss” in cases of positive value and under the heading “Financial liabilities at fair value through profit or loss” when the value is negative. Gains and losses are recognised in the income statement under “Net gains or losses from financial instruments at fair value through profit or loss”.

14 — Report of the Governor 2016 — CEB
2.8 Interest income and expense
Interest income and expense are recognised in the income statement for all the financial instruments using the effective interest rate method.

The effective interest rate is the rate that discounts exactly the estimated future cash payments or receipts through the expected life of the financial instrument to the net book value of the financial asset or liability. This calculation includes commissions paid or received, when similar to interests, transaction charges and all premiums and discounts.

2.9 Cost of risk
In terms of credit risk, cost of risk includes depreciation provisions related to loans, fixed income securities, depreciation related to financing commitments and guaranties given, losses on irrecoverable receivables less recoveries of amortised receivables. Charges for litigations inherent to banking activity are also accounted for in cost of risk.

3. Fixed assets
Fixed assets recorded in the Bank’s balance sheet include tangible and intangible operating assets.

These fixed assets are recorded at their purchase price to which expenses directly connected are added.

Depreciation is calculated according to the estimated useful life of the asset expected by the Bank using the straight-line method, the residual value of the asset being deducted from its depreciable basis.

At every end-date, fixed assets are valued at their amortised cost (cost less depreciation and any possible impairment) and if necessary, an accounting adjustment is carried out with respect to the duration of the useful life and the residual value.

**Tangible assets**

The following is the breakdown of the “building” part of the operational premises, every element being depreciated according to its own useful life:

- Main works, façade and roofing (1)
- General and technical installations 10 years
- Fixtures and fittings 10 years

(1) Given the Bank’s headquarters location in the centre of Paris, its residual value is assigned to the component “main works, façade and roofing” which is not subject to depreciation.

Land is not depreciated. The other tangible fixed assets are depreciated according to the following durations:

- Fittings and furniture 10 years
- Vehicles 4 years
- Office and IT equipment 3 years

**Intangible assets**

Intangible assets (IT software) are amortised according to the following durations:

- Application software 5 years
- System software 3 years
- Office software 1 year

4. Post-employment staff benefits
The Bank’s pension scheme is a defined benefit scheme, funded by contributions made both by the Bank and by the employees. Benefits are calculated on the basis of the number of years of service and a percentage of the basic remuneration of the last year of service.

The other post-employment benefit schemes (health care, fiscal adjustment and termination of service) are likewise defined benefit schemes.

These schemes represent commitments on the part of the Bank, which are valued and for which provisions are set up. In conformity with IAS 19, actuarial valuations are carried out on these commitments, taking into account both financial and demographic assumptions. The actuarial gains or losses are recorded in the balance sheet under heading “Provisions” by counterparty of “Statement of comprehensive income”.

The amount of the provision in relation to these commitments is determined by an independent actuary in accordance with the projected unit credit method.
5. Social Dividend Account

The Social Dividend Account (SDA) is used to finance grants in favour of projects complying with CEB objectives and located in eligible countries, as defined by the Administrative Council. The operating principles of the SDA were revised by Resolution AC 1589 (2016) approved by the Administrative Council on 17 November 2016. The revision consisted of making all of the Bank’s member states eligible for guarantee schemes.

The grants financed by the SDA may take the form of technical assistance, interest rate subsidies, guarantees and grant contributions.

- **Interest rate subsidies**
  Interest rate subsidies are used to reduce the amount of interests borne by a CEB borrower. Interest rate subsidies cover the interest rate differential between the rate applied by the Bank and the rate effectively paid by the borrower, for each tranche of the loan.

- **Guarantees**
  Guarantees on loans awarded by the CEB enable the Bank to fund projects that have a strong social impact but carry a high credit risk. The amount, the trigger event and the recovery mechanism are determined on a case by case basis.

- **Technical assistance**
  Technical assistance is used to help a CEB borrower prepare and implement its project. Pre-feasibility, feasibility and technical studies, design and operating plans, institutional and legal appraisals, and other consultancy services necessary for the project preparation, execution or monitoring and reporting, procurement supervision and impact assessment may thus be financed.

- **Grant contributions**
  Grant contributions may be awarded in the framework of emergency situations or take the form of contributions to a common cause in the member states, pursued in cooperation with other international actors.

  Grants financed by the SDA are approved by the Administrative Council of the Bank, except technical assistance grants smaller than or equal to € 300 thousand, which are approved by the Governor.

  The SDA is funded mainly by contributions from the Bank’s member states, through dividends of a social nature, paid when the Bank’s annual profit is allocated.

6. Related parties

With respect to IAS 24, the Bank is not a subsidiary of any entity. The financial statements are not affected by related party relationships.

The information concerning Chairpersons and Appointed officials of the Bank is presented in paragraph 7 below.

7. Compensation for Chairpersons and Appointed Officials

The Articles of Agreement of the CEB lay down that the organisation, administration and supervision of the Bank are divided between the following organs:

- the Governing Board
- the Administrative Council
- the Governor
- the Auditing Board.

The Governing Board and the Administrative Council each consist of a Chairperson and one representative appointed by each member state. A Vice-Chairperson is elected among the members of each body. The Chairperson of the Governing Board and the Chairperson of the Administrative Council are elected by the Governing Board for a 3-year term, and may be re-elected for a further 3-year term. The annual allowances of the Chairpersons and the Vice-Chairpersons are fixed by the Administrative Council for the duration of their terms of office.

The Governor is appointed by the Governing Board for a 5-year term and may be re-appointed once. He is assisted by one or more Vice-Governors, who are appointed by the Governing Board, for a 5-year term renewable once, upon the Governor’s proposal, following an opinion on conformity from the Administrative Council and after consultation with the members of the Governing Board. Their emoluments are fixed by the Administrative Council, within the framework of the approval of the annual budget of the Bank.
The gross compensation for CEB’s Chairpersons and Appointed Officials can be summarised as follows:

<table>
<thead>

</table>

(1) The Chairman of the Governing Board has renounced his allowances.
(2) Allowances of € 500 are paid monthly. The incumbent of the seat changed on 19 March 2016.
(3) Start of Vice-Governor Monticelli’s term on 1 November 2015.
(4) Start of Vice-Governor Sánchez-Yebra Alonso’s term on 18 December 2016.
(5) End of Vice-Governor Ruiz-Ligero’s term on 17 December 2016.
(6) End of Vice-Governor Guglielmino’s term on 31 October 2015.
(7) Resignation of Vice-Governor Dowgielewicz on 31 August 2015.

The CEB’s Chairpersons and Appointed Officials do not receive any stock options or any other kind of bonus.

At the end of their mandate, the Governor and Vice-Governors receive either a retirement pension or a tax exempt temporary allowance in an amount of 40% to 50% of their last basic salary, for a period of up to 3 years. This allowance, cumulated with possible emoluments from other sources, must not exceed, in any case, the amount of the last basic salary paid by the CEB. For 2015, these temporary allowances were granted to the former Vice-Governor Guglielmino (in office until 31 October 2015) for an amount of € 21 thousand and to the former Vice-Governor Tarafás (in office until 1 May 2012) for an amount of € 45 thousand. For 2016, these temporary allowances were granted to the former Vice-Governor Guglielmino for an amount of € 127.5 thousand.

The Governing Board, by its Resolution CD 383 (2010), has decided to abolish this temporary allowance for the new officials (Governor and Vice-Governors) appointed for their first term after 30 March 2010, the date of adoption of the resolution.

The Governor and Vice-Governors are affiliated to the medical and social cover as well as to the pension scheme of the CEB.

8. Taxation

The Third Protocol to the General Agreement on Privileges and Immunities of the Council of Europe states that the Bank’s assets, income and other property are exempt from all direct taxes.
NOTE B - Risk Management

The primary purpose of risk management is to ensure the Bank’s long term financial sustainability and operational resilience while enabling the CEB to fulfil its social mandate. Thus, striving to implement international best banking practices, the Bank promotes a sound and prudent risk culture across all of its business lines.

This Note provides information about the Bank’s exposure to the main financial risks it faces in its regular course of business, namely credit risk, market risk, liquidity risk and operational risk. It also provides information about the objectives, policies, procedures, limits and controls that provide the CEB with the appropriate tools to assess, monitor, report, mitigate and control such risks.

While the Bank is not subject to member states’ regulations, it considers European Union Directives on banking regulation and recommendations from the Basel Committee on Banking Supervision as the reference for its Risk Management Framework.

The CEB regularly reviews its risk and control policies, including its monitoring procedures in compliance with best banking practices.

- **Risk Appetite**

  The Bank defines Risk Appetite as the aggregate level and types of risk it is willing to assume within its risk capacity to achieve its strategic objectives and business plan.

  A key instrument for fulfilling the CEB’s mandate is to lend funds at advantageous rates, which requires raising funds on capital markets at competitive rates. For that purpose, to maintain a very strong credit risk profile is paramount.

  The CEB financial and risk profile is driven by its risk appetite as set out with quantitative and qualitative key indicators and limits under the so called prudential framework (see chapter 4).

  The Bank’s risk management adopts a prudent approach and aims to minimise risk to ensure the Bank’s long-term financial sustainability. The Bank has developed and implemented a comprehensive risk management framework to identify, assess, monitor, report, mitigate and control all the risks inherent in the CEB’s operations, as a result of both on- and off-balance sheet transactions.

- **Organisation**

  The Directorate for Risk and Control (R&C) is responsible for implementing the Risk Management Framework within the CEB and is independent from other operational and business directorates, reporting directly to the Governor. The departments within the Directorate for R&C are dedicated to specific risk areas: credit, operational risk, financial transactions, derivatives and collateral management.

  The Asset & Liability Management (ALM) Department in the Finance Directorate is in charge of market risk management (interest and currency exchange rates) as well as the liquidity risk incurred by the Bank.

- **Decision-making Committees**

  The Bank has set-up different decision-making committees responsible for defining and overseeing risk management policies in their respective fields. The Governor chairs all these committees.

  - The **Finance & Risk Committee** meets on a weekly basis and takes credit decisions in relation with lending and treasury exposure, based on internal credit risk assessments and recommendations. The Committee also reviews trends in the financial markets and the Bank’s financial activity (liquidity management and debt issuance).

  - The **Asset & Liability Committee (ALCO)** meets on a monthly basis and formulates strategic orientations and addresses on a forward looking basis interest rate, foreign exchange rate and liquidity risk arising throughout the balance sheet. In addition, on a quarterly basis a “Special ALCO” addresses ALM and funding issues.

  - The **Committee for Operational Risks & Organisation (CORO)** reviews operational risk issues at the CEB on a semi-annual basis and ensures that adequate steps are taken to mitigate, monitor and control these risks.

  - The **IT Steering Committee** reviews information systems issues and takes the appropriate actions to ensure operational resilience and business continuity. In addition, in order to fully ensure that IT-related decisions are properly aligned with business stakes and priorities, IT governance bodies were reinforced in 2015 with the creation of an IT Project Committee chaired by a Vice-Governor which enables, through regular meetings, to anticipate business requirements and develop a shared vision on IT.
Internal Audit (IA) is a permanent, self-contained entity within the CEB's internal control system. The objective of IA is to provide the Governor and the CEB's controlling bodies with an independent and objective assurance of effective and controlled businesses and operational activities. IA examines whether the CEB's activities are performed in conformity with existing policies, procedures and best practices, and assesses their associated risks. It also proposes recommendations for potential improvements of CEB's operations.

The Office of the Chief Compliance Officer (OCCO) is the principal organisational unit within the CEB that is specifically tasked to address Anti-Money Laundering / Counter-Financing of Terrorism and tax compliance risks, as well as integrity and corruption issues. OCCO's core activities are to perform integrity checks on operations and counterparties, to safeguard the integrity of staff and collegial organs and to ensure that procurement selection procedures comply with internal rules. OCCO's mission is to promote ethical standards and to protect the Bank from financial and reputational risks arising from the failure to comply with the Bank's standards and policies and it contributes in an independent manner to the CEBs effective management of compliance risks. The Chief Information Security Officer (CISO) ensures that CEB's information assets and technologies are adequately protected. The CISO is in charge of defining the security policy, and of identifying, developing, implementing, and maintaining processes across CEB to reduce information and information technology (IT) risks. The CISO responds to incidents, establishes appropriate standards and controls, manages security technologies, raises awareness for IT risks and ensures that IT security policies and procedures are applied.

Auditing Board: composed of three representatives from member states appointed on a rotating basis by the Governing Board for a three-year term (outgoing members act as advisors for an additional year), the Auditing Board examines the Bank's accounts and checks their accuracy. The Auditing Board's report, an excerpt of which is appended to the financial statements, is presented to the Bank's governing bodies when the annual financial statements are submitted for approval.

External Audit: appointed by the Governing Board for a four-year term and renewable once for a three-year term following a tender procedure, based on the Auditing Board's opinion and recommendations by the Administrative Council. The External Auditor is responsible for auditing the Bank's financial statements according to IFAC professional auditing standards and for reviewing its internal control and risk management processes. The external auditor drafts various reports, including the opinion report.

In addition, the Bank is assessed by three international rating agencies: Fitch Ratings, Moody's and Standard & Poor's, which perform in-depth analyses of the Bank's financial situation and long-term creditworthiness, pursuant to a rating assignment on an annual basis.

Internal and external reporting on risk management

The Risk & Control Directorate reports on a weekly basis to the Finance & Risk Committee on credit risk across the Loan and Treasury activities. In addition, the Finance & Risk Committee receives information on capital market developments and the liquidity position.

On a monthly basis the Finance Directorate reports to the Assets and Liability Committee on market risks namely interest rate risk, currency risk and liquidity position.

The quarterly Risk Management Report presented both to the Administrative Council and the Governing Board provides information to the shareholders about the development of the CEB's exposure to the main types of risks: credit, market, liquidity, operational risks and compliance with the prudential framework as defined internally.

In terms of external reporting on risk management, the Bank provides extensive information to the rating agencies as a support for their annual assessment. The CEB's annual report prepared under Form 18-K in connection with the registration statement filed with the U.S. Securities and Exchange Commission also includes information on the Bank’s risk management.

Finally, the CEB's annual financial report of the Governor provides a fair view of the risk management processes and practices in place at the Bank and discloses detailed data on its risk exposure.
1. Credit risk

■ Overview of the assessment process

Credit risk is defined as the potential loss arising from a bank borrower or counterparty failing to meet its obligations in accordance with agreed terms. The Bank is exposed to credit risk in both its lending and treasury activities, as borrowers and treasury counterparties could default on their contractual obligations, or the value of the Bank’s investments could become impaired. Credit risk may also materialise in the form of a rating downgrade that may negatively affect the Bank’s capital or provisioning against credit losses. Credit risk also covers settlement and pre-settlement risk. Likewise, collateral risk is considered as part of credit risk (collateral is essentially a credit risk mitigation technique). Overall, credit risk is a function of the amount of credit exposure and the credit quality of the borrower or transaction.

■ Credit risk identification and assessment

The credit risk management aims to identify all potential sources of credit risk arising from the Bank’s activities and products across its balance sheet and off-balance sheet operations. Credit risk may materialise in the form of rating downgrades, (cross-) default on payment obligations or during the transaction settlement process.

Credit risk assessment is conducted by the Credit Risk Management Department (CRD) (Risk & Control Directorate) independently from lending or treasury officers with the aim to provide appropriate checks and balances to ensure that credits are made in accordance with risk principles and to provide an independent judgement uninfluenced by relationships with the borrower or intermediaries. Credit exposure is measured, monitored and controlled on a daily basis. Breach of limit, if any, are reported to senior management.

Internal credit ratings are the result of the Bank’s independent internal credit risk assessment. Internal credit ratings are an opinion on the ability and willingness of a borrower to pay their obligations in full and in a timely manner. They are generally based on a qualitative and quantitative assessment of risk factors and potential scenarios that may ultimately lead to a default situation. Internal credit ratings are assigned to all counterparties in the Finance Directorate and in the Loans & Social Development Directorate.

Internal ratings are mapped to the rating scale of international rating agencies and thus each internal rating corresponds to a rating on the scale as described in the following table:

■ Credit risk mitigation

The CEB actively uses credit risk mitigation (CRM) techniques to control credit risk or deterioration in credit risk during the life of the transactions. Credit risk mitigation techniques can take the form of guarantee or collateral or contractual safeguards (contractual covenants).

Credit risk mitigation techniques for new transactions are proposed by CRD and subject to the approval of the Finance & Risk Committee. Credit risk mitigation techniques for existing transactions are presented to the Finance & Risk Committee at the annual counterparty review.

The credit risk of a new project is assessed during the appraisal process and requires approval of the relevant internal committees and the Administrative Council.

An overall framework for financial operations is established by the Administrative Council through the Bank’s financial and risk policies. Within this framework, treasury transactions are assessed by CRD and submitted to the Finance & Risk Committee for approval.

Finally, Large Exposure and concentration limits are also defined and reported to the Finance & Risk Committee.

1 Formerly “Global Risk Management Department”
Overall credit risk exposure

The following table presents the Bank’s credit risk exposure both in the Loans and Social Development Directorate (loans and financing commitments) and the Finance Directorate (deposits, securities and derivatives) at 31 December 2016 and 31 December 2015.

Loans & Social Development Directorate Activity

Loan operations

Credit risk in loan operations mainly arises from a bank borrower or counterparty failing to meet its contractual obligations or the materialisation of a rating downgrade.

Loan portfolio

At 31 December 2016, loans outstanding reached € 13.7 billion, increasing by 4.9% (+ € 643 million) compared to end 2015. No missed payments have been recorded in 2016, as was the case in 2015.

The table below displays the risk profile of the loan portfolio by rating and type of counterparty:

- Rating as recommended by the Basel Committee (second best rating), or, when not rated by international rating agencies, internal rating
- Loans reported after CRM at nominal value and excluding accrued interest

A significant part of the loan portfolio benefits of credit enhancements (collateral and guarantees) allowing for an improvement in credit risk quality. At the end 2016, the Bank has received € 5.5 billion in guarantees and € 0.6 billion of collateral under its loan portfolio.

The impact of credit enhancements on the risk profile of loans outstanding is shown below:

</table>

- Rating as recommended by the Basel Committee (second best rating), or, when not rated by international rating agencies, internal rating
- Loans reported at nominal value and excluding accrued interest
At 31 December 2016, loans outstanding after CRM rated investment grade represented 78.3% of the total loan portfolio, compared to 80.5% at end 2015. Loans outstanding to counterparties not rated by international rating agencies represented €3.3 billion, or 24.4% before CRM and €697.6 million, or 5.1% after CRM of the total portfolio with internal ratings ranging from 3.0 to 9.5.

The following table displays the breakdown of loans outstanding by remaining time to maturity:

¹ Non CEB member state: projects to be undertaken in a CEB member state, but to be guaranteed by Austrian counterparties
Stock of projects / Financing commitments

The Stock of projects encompasses all projects approved by the Administrative Council awaiting financing. Financing commitments are projects still awaiting financing and for which a framework loan agreement has been signed. The Stock of projects reached € 5.5 billion at 31 December 2016 (31 December 2015, € 4.7 billion) with 78.7% rated investment grade (31 December 2015: 79.5%).

Finance Directorate Activity

■ Treasury operations

Credit risk in treasury operations mainly arises through placements in deposits, investments in securities and by entering into derivatives transactions for hedging purposes.

■ Deposits

The treasury monetary portfolio consists of short-term placements such as “nostro” accounts, bank deposits up to one year, cash received as collateral from derivative and (reverse) repurchase (repo) activities. Repo transactions are included in this portfolio, which aims at managing day-to-day cash flow in all required currencies. Eligible counterparties must have a minimum internal rating of 6.5 (BBB+) for investments up to three months and 7.0 (A-) for investments between three months and one year.

The following table presents the breakdown by deposit type and credit rating:

<table>

■ Securities portfolios

The Bank manages three securities portfolios: the short-term liquidity portfolio (short-term securities with maturities up to one year), the medium-term liquidity portfolio (maturities of one year and up to 15 years) and the long-term portfolio (maturities of one year and up to 30 years). Eligible counterparties must have a minimum internal rating for maturities up to three months of 6.0 (BBB) for sovereign and 6.5 (BBB+) for financial institutions; a minimum rating of 7.0 (A-) for investments with maturities between three months and one year and a minimum rating of 8.0 (A+) for investments with maturities of more than one year.

### Derivatives

The CEB uses Interest Rate Swaps (IRS) and Currency Interest Rate Swaps (CIRS) to hedge market risk on its lending, investment and funding transactions.

Derivatives transactions require prior credit clearance of the issuer counterparty by the Finance & Risk Committee and the signing of an ISDA Master Agreement and a CSA (Credit Support Annex) collateral agreement with the counterparty. The minimum rating required for swap counterparties at the date of entering into new swap transactions must be 6.5 (BBB+). Eligible collateral may be cash or debt securities. The minimum rating for eligible bonds received as collateral must be 7.0 (A-). All swap transactions are valued at their net present value and positions per counterparty are monitored daily so that additional collateral can be called according to CSA margin call options ranging from daily to three times per month. The CEB has signed CSA collateral agreement with all its derivative counterparties within the framework of its swap activities.

At 31 December 2016, the derivatives’ credit risk exposure included swaps add-on for € 463 million (2015, € 578 million) and non-covered NPV (Net Present Value) after credit enhancement of € 9 million (2015, € 51 million). At the end of 2016, the Bank had received € 1.6 billion as collateral thereof 86% cash and 14% sovereign securities (French government bonds).

The breakdown of the nominal value of swaps by instrument and by maturity is shown in the table below:

Notes to the financial statements

NOTE B

Concentration - Large Exposure

Concentration risk arises from too high a proportion of the portfolio being allocated to a specific country or obligor or to a particular type of instrument or individual transaction. Large exposure is the overall exposure (loans, securities, deposits and derivatives) to a single counterparty or a group of connected counterparties, exceeding 10% of prudential equity (paid-in capital, reserves and net profit). Prudential equity at 31 December 2016 amounts to €2.9 billion.

In line with Basel Committee recommendations and European Union directives, the CEB ensures that no exposure to a counterparty or a group of connected counterparties exceeds the limit of 25% of prudential equity, and that the cumulative total of large exposures does not exceed 800% of prudential equity. Sovereign exposure is excluded from the large exposure calculation and presented only for information purposes.

At 31 December 2016, there were 15 counterparties or groups of counterparties with an exposure above 10% of prudential equity, or €287 million, and therefore were considered as Large Exposure (16 counterparties in 2015). However, no counterparty or group of connected counterparties exceeded the limit of 25% of the CEB’s prudential equity (same as in 2015). The total outstanding to these counterparties stood at €6.5 billion, i.e. 227% of the CEB’s prudential equity well below the 800% limit (€6.9 billion, i.e. 250% in 2015).

When weighting the exposure by risk only three counterparties or groups of counterparties exceeded the limit of 10% of the prudential equity for a total amount of €937 million (two counterparties and €639 million in 2015).

Notes to the financial statements

NOTE B

2. Market and liquidity risks

2.1. Market and liquidity risk management principles

In a context of rising regulatory expectations and historically low levels of interest rates, the new financial and risk policy adopted in June 2016 refined and upgraded all the risk indicators associated with the Bank's activity (including credit risk). Existing limits were reviewed and new ones defined to allow for greater flexibility in managing all the risks across the balance-sheet while still maintaining a prudent approach.

INTEREST RATE RISK

Interest-rate risk is defined as the exposure of the Bank's economic value or results to adverse movements in interest rates. Exposure to interest-rate risk occurs when there is asymmetry over time between rate types for uses (loans, securities and deposits) and resources (borrowings), and their reset frequencies.

The CEB's ALM strategy is to maintain a sustainable revenue profile as well as to limit the volatility of the Bank's economic value. The CEB has chosen to privilege the revenue profile in view of the constraint of self-financing the CEB's growth.

Since the adoption of the new financial and risk policy in June 2016, the Bank has increased the flexibility of its balance-sheet management by diversifying the categories of fixed-rate assets in which fixed-rate liabilities are invested.

The Bank has thus extended the range of products in which its own funds are invested to include the category of fixed-rate loans (in addition to fixed-rate long-term securities). It also took advantage of this opportunity to adjust its own funds duration objective.

Apart from the duration target for own funds, the Bank ensures that the mismatches between assets and liabilities in terms of volume, currency and interest-rate characteristics, remain within prudent limits. The Bank takes recourse to natural hedges whenever possible and, if necessary, uses derivative products, mainly interest rate and currency swaps, only for hedging purposes.

In line with Basel Committee recommendations, the Bank has defined indicators and set limits to measure the impact of interest-rate changes on both its earnings and economic value. The main indicators are the gap analysis (interest rate and index gaps), the economic value sensitivity and the earnings sensitivity.

Interest rate gap
The interest-rate gap measures the CEB's static exposure to interest rate risk.

Index gap
The index gap measures the rate frequency mismatch between assets and liabilities of different maturities. The Bank uses the index gap mainly to monitor exposure to a distortion of one maturity against the others, mainly the Eur3M against the Eur6M, which may adversely impact the economic value and earnings sensitivity.

Economic value sensitivity
Economic value is defined as the Net Present Value of expected cash-flows on all assets, liabilities and off-balance-sheet items, including own funds.

The economic value sensitivity measures the deviation between the assumed structural interest-rate risk defined by the duration of own funds and the real interest-rate risk of the balance sheet.

Stress scenarios apply a parallel shock of +/-10bps, +/-100bps and +/-200bps on the curves or a change in the shape of the curve (twist).

The economic value sensitivity to a shock of +/-10bps is limited to 0.5% of own funds. At 31 December 2016, it amounted to € 8.8 million.

Earnings sensitivity
The Bank assesses the volatility of its earnings due to adverse movements in market rates on a dynamic basis, over the twelve forthcoming months.

Dynamic hypotheses replicate the characteristics of stocks, integrating the seasonality effects whenever necessary.

Stress scenarios are defined by applying parallel shocks on the market interest-rate curves.

The sensitivity of the Bank's earnings is limited to 0.08% of own funds for a +/-10bps change in interest rates.

28 — Report of the Governor 2016 — CEB
Breakdown of assets, liabilities and off-balance-sheet items by interest-rate type at 31/12/2016

The table below shows the CEB’s overall balance-sheet operations. It provides a static view of interest rate risk and its hedging, as at the end-date of the accounting period, through a breakdown of assets and liabilities by interest-rate type (fixed rate and variable rate). It also outlines the effect of interest rate risk hedging.

The outstanding fixed-rate assets before hedging amount to € 16 093 million; hedging instruments allow the exposure to drop to € 9 381 million.

This exposure of € 9 381 million after hedging consists of:

- scheduled outstandings (€ 6 082 million), mainly short-term deposits (€ 2 423 million), insensitive to variations in market rates and considered as fixed rate, the fixed rate long-term portfolio (€ 2 472 million) and unhedged fixed-rate loans (€ 521 million).
- non-scheduled outstandings (€ 3 299 million), in particular swap valuations that, by nature, cannot be covered.

Reciprocally, the fixed-rate liability exposure of € 25 044 million before hedging is reduced to € 5 867 million after hedging.

This exposure of € 5 867 million after hedging consists mainly of:

- non-scheduled outstandings (€ 5 864 million), composed mainly of available equity, the Social Dividend Account and the provision for pension commitments (€ 3 072 million) to which the long-term securities are matched, swap valuations (€ 2 045 million) and borrowing valuations (€ 596 million) that, by nature, cannot be covered.

The difference between fixed-rate assets and liabilities after hedging amounts to € 3 558 million, mainly made up of short-term deposits that are represented at fixed rate. Their low duration exposes them only slightly to interest-rate risk. Consequently, the residual interest-rate risk is low and interest rate risk hedging is effective.

In thousand euros

The outstanding fixed-rate assets before hedging amount to € 16 093 million; hedging instruments allow the exposure to drop to € 9 381 million.

This exposure of € 9 381 million after hedging consists of:

- scheduled outstandings (€ 6 082 million), mainly short-term deposits (€ 2 423 million), insensitive to variations in market rates and considered as fixed rate, the fixed rate long-term portfolio (€ 2 472 million) and unhedged fixed-rate loans (€ 521 million).
- non-scheduled outstandings (€ 3 299 million), in particular swap valuations that, by nature, cannot be covered.

Reciprocally, the fixed-rate liability exposure of € 25 044 million before hedging is reduced to € 5 867 million after hedging.

This exposure of € 5 867 million after hedging consists mainly of:

- non-scheduled outstandings (€ 5 864 million), composed mainly of available equity, the Social Dividend Account and the provision for pension commitments (€ 3 072 million) to which the long-term securities are matched, swap valuations (€ 2 045 million) and borrowing valuations (€ 596 million) that, by nature, cannot be covered.

The difference between fixed-rate assets and liabilities after hedging amounts to € 3 558 million, mainly made up of short-term deposits that are represented at fixed rate. Their low duration exposes them only slightly to interest-rate risk. Consequently, the residual interest-rate risk is low and interest rate risk hedging is effective.
FOREIGN EXCHANGE RISK

The foreign exchange (FX) risk is the potential loss on on-and off-balance sheet positions arising from unfavourable movements in FX rates. The FX risk is minimal as the Bank maintains very small positions in foreign currencies.

The Bank uses natural hedging whenever possible. It resorts to derivative products only for hedging purposes.

On a monthly basis, the Bank resorts to spot currency purchases or sales when the residual foreign currency position in a given currency exceeds the counter-value of € 1 million.

Foreign currency thresholds have been defined and the Bank ensures that its daily exposure per currency does not exceed defined limits.

The table above shows that, after taking hedging instruments into account, residual FX exposure is not significant.

LIQUIDITY RISK

Liquidity management plays a crucial role in safeguarding financial flexibility, especially when adverse market conditions make access to long-term funds difficult or impossible.

Liquidity management ensures that the Bank is able to meet its payment obligations in full and in a timely manner whenever they become due. This is particularly important because unlike commercial banks the CEB does not hold any deposits for clients, and does not have access to refinancing by the Central Bank.

As a general prudent objective, the Bank maintains ample liquidity to be able to withstand potential periods of no access to the market and still continue its activity even under extreme market conditions.

The CEB’s liquidity risk tolerance is transposed into comprehensive risk indicators and supported by adequate limits. The main indicators are the following:

1. The self-sufficiency period, i.e. the time period during which the Bank is able to fulfil its stressed expected net cash outflows stemming from ongoing business operations without access to the market and without sale/repoing of its available liquid assets in the market.

2. The survival horizon, i.e. the time period during which the Bank is able to fulfil its stressed expected net cash outflows stemming from ongoing business operations without access to the market but including the sale/repoing of its available stressed liquid assets in the market.

Stress tests carried out on the liquidity curve take into account the absence of opportunities for refinancing, credit risk haircuts on loans and securities representing the default probability of a given counterparty, based on credit ratings and maturities, liquidity risk haircuts on securities which materialise a valuation risk and take into account rating, maturity and economic sector.

3. The level of the Bank’s short-term liquidity must comply with a prudential short-term liquidity ratio (see prudential ratios).

Furthermore, by estimating variations in its liquidity indicators according to different funding scenarios, the Bank defines its refinancing program in terms of volume and maturities.
## Balance sheet position by maturity

Each term financial instrument contract is simultaneously presented in the line “To be received” and in the line “To be paid” in the case of foreign exchange or currency swaps.
3. Operational risk

The CEB implemented an Operational Risk Management Policy to codify its approach to identifying, measuring, controlling, and reporting operational risks. This document lays down sound practices to ensure that operational risk is managed in an effective and consistent manner across the CEB.

The operational risk is defined as the risk of potential loss resulting from inadequate or failed internal processes, people and systems or from external events and includes the legal risk. Moreover, the CEB takes into account reputational risks linked to its activities. By deliberately choosing to apply Basel Committee Recommendations and best practices, the Bank is committed to constantly assessing its operational risk and to implementing the appropriate mitigating measures.

The operational risk framework of the CEB is reviewed and approved at the meetings of the semi-annual Committee for Operational Risks and Organisation (CORO). Chaired by the Governor and composed of the Senior Management and the Directors of the Directorates, the CORO sets acceptable levels for the operational risks run by the CEB and ensures that Directors take the necessary steps to monitor and control these risks within their respective Directorates. The operational risk capital charge is calculated and presented in the quarterly risk management report.

In close cooperation with the various business lines, the Operational Risk Department is in charge of coordinating the day-to-day management of operational risks. The whole framework is centrally and electronically managed: the risks and their evaluation following a predefined methodology, risk mitigation measures and action plans. The collection of operational risk incidents, including “near misses”, is also integrated in this tool in order to ensure the efficiency of the control framework and to complete the risk mapping and assessment.

In 2016, the Operational Risk Department implemented the reporting on permanent internal controls with the purpose of ensuring that the control framework is always adequate in terms of design and effectiveness. Effective as of 2017, each Directorate will report on a regular basis on the efficiency of its respective permanent control environment after performing tests on key controls covering the main risks. The results will be reported to the CORO.

The Operational Risk Department is also responsible for the modelling of all procedures, in collaboration with the business lines, in order to design a procedure and control map. A dedicated intranet site was implemented to give access to all procedures to all staff. To hedge against a disruption of its business activities, the CEB has a Business Continuity Plan (BCP) in place. This plan comprises a crisis management plan, an underlying technical framework, including data centres, emergency dealing room, user back-up positions, telecommuting solutions, as well as business line specific plans.

In the calculation of capital requirements, the CEB adopted the Basic Indicator Approach (proposed under Basel II). The Bank calculates this capital charge on the basis of the average net banking income over the previous three years. This charge is compared to prudential equity.

At 31 December 2016, the operational risk capital charge amounted to € 24.8 million, stable compared to € 24.9 million at 31 December 2015.

4. Prudential framework

Following the review of the Financial & Risk Policy in 2016 approved by the Administrative Council, the ratios of the prudential framework have been adjusted. The key changes concern the management of interest rate risk through a balance sheet approach, liquidity risk by means of a liquidity curve approach and credit risk with the internal rating becoming the reference for the treasury activity.

The ratios and indicators are organised around six main areas: capital, leverage, liquidity, market credit risk, interest rate risk and foreign exchange rate risk.

Capital
- Capital adequacy ratio (CAR) measures, under the Standardised Approach, the Bank’s prudential equity versus total Risk-Weighted Assets (RWA). The Bank defines and monitors this ratio to ensure that it holds sufficient capital to absorb unexpected losses embedded in its operations arising from credit, market and operational risks. This ratio is calculated as follows:

\[
\text{Capital adequacy ratio} = \frac{\text{Prudential equity}}{\text{Risk weighted assets}}
\]

- Prudential equity: paid-in capital, reserves and net profit
- Risk weighted assets: \( \sum [\text{Exposure at Default} \times \text{risk-weighted factor}] \)

The CAR stood at 26.7% at the end of 2016 (2015: 26.3%), owing to an increase in RWA in the loan activity while RWA for the finance activity remain broadly stable.

The actual floor for this ratio is set at 10.5% of CEB’s RWA. Credit risk for the bulk of capital requirements stands at 96.7%, split among credit risk in the loan portfolio, i.e. 77.0%, and credit risk in finance operations, i.e. 19.7%.
Gearing ratio (GR) is the ratio of loans outstanding after swap and guarantees to own funds and establishes a volume ceiling (instead of a risk ceiling) to the Bank’s loan activity. This ratio is primarily intended to provide a benchmark to other multilateral development banks’ volume of loans.

\[
\text{Ratio Gearing} = \frac{\text{Outstanding loans after swaps and guarantees}}{\text{Own funds}}
\]

- Own funds: subscribed capital, reserves and net profit

For a ceiling of 2.5 times of own funds, the Bank could lend up to € 19.3 billion. The ratio stood at 1.77 at the end of 2016 compared to 1.71 at the end of 2015 and has slightly increased in the last year owing to the increase in the loan portfolio offset by an equivalent development in own funds.

Leverage

Indebtedness ratio (IR) compares total debt outstanding after swap to prudential equity (Ep). Total debt outstanding includes debt evidenced by a security after swap, ECPs, bank advances and term deposit accounts, collaterals excluded. The limit is fixed at ten times Ep, i.e. € 28.7 billion. The ratio stands at 6.30 at the end of 2016 (2015: 6.17) showing a slight increase due to higher debt outstanding during 2016 despite gradually increasing equity.

Treasury asset ratio (TAR) compares total financial assets after swap to prudential equity. Total financial assets comprise the outstanding amounts in the securities portfolios (long-term, mid-term and short-term) after swap, bank deposits, repos, “nosto” accounts, collaterals excluded. The limit is fixed at four times the CEB’s prudential equity, i.e. € 11.5 billion. The ratio stood at 2.66 at 31 December 2016, up from 2.61 at 31 December 2015, owing to more fluctuating treasury assets despite of a steady increase in equity.

Liquidity

Short-Term Liquidity ratios measure the Bank’s capacity to handle its net liquidity requirements over an extended market disruption or economic downturn at different periods of time. The analysis of potential “liquidity gaps” between sources (liquid assets) and uses (liquidity requirements) of cash is done on a forward-looking basis over different periods: one, three, six and twelve months and thereafter stressed for adverse market and economic conditions by applying risk haircuts depending on the asset class, the rating and the maturity. The minimum level of liquid assets is set at 100% of net liquidity requirements for each timeframe. At 31 December 2016, the short-term liquidity ratio stood at: 601% for a one-month period (2015: 561%), 219% for a three-month period (2015: 223%), 149% for a six-month period (2015: 204%) and 153% for the one-year period (2015: 138%).

Self Sufficiency Period Ratio measures the time period during which the Bank is able to fulfil its stressed expected net cash outflows without access to the market for new funding and without the sale-repoing of assets. The floor is set out at > six months. The ratio reached 14 (months) at 31 December 2016.

Market Credit Risk

Minimum Internal Rating defines the minimum rating at purchase date under which the Bank may enter into transactions with issuers, obligors and counterparties. The Bank’s Minimum Internal rating for short-term investments is ≥ 7.0 (A-) and for long-term investments is ≥ 8.0 (A+). As of 31 December 2016 there were no counterparties/transactions at minimum rating below the defined threshold at purchase date.

Interest Rate Risk

Economic Value Sensitivity measures the change in the economic value of the Bank, including own funds (market risk (MR)) due to an interest rate shock of +/- 10 basis points. Its absolute value is fixed < 0.5% of own funds (MR), i.e. 15.5 million. The economic value sensitivity was € 8.8 million at 31 December 2016, therefore within its fixed limits.

Foreign Exchange Rate Risk

Spot Net Open Position measures the total asset amount minus total liability amount in a foreign currency, including both on- and off-balance sheet positions. Its absolute value is fixed at < € 1 million per currency. The spot net open position in each currency was below the approved limit at 31 December 2016.

---

1 Sources of cash: drawdown of unrestricted cash and short-term inter-bank placements, repayment or sale of unencumbered high quality liquid securities and repayment of loans
2 Uses of cash: issues repayments, financing commitments disbursements and requirements to give back cash received as collateral on derivatives (collateral amounts)
3 For maturities below 3 months, the minimum internal rating may be 6.0 (BBB) for sovereign bonds and 6.5 (BBB+) for short-term bonds and deposits
4 At the end of the month
NOTE C - Financial instruments at fair value through profit or loss and hedging derivative instruments

All the Bank’s micro-hedging financial derivative instruments for which the hedging relationship is not recognised by IAS 39 are recorded under the balance sheet headings “Financial assets at fair value through profit or loss” or “Financial liabilities at fair value through profit or loss”.

All the Bank’s micro-hedging operations recognised under IAS 39 are fair value hedges and are recorded in the balance sheet under the heading “Hedging derivative instruments”. These operations hedge the fair value of the fixed rate financial assets and liabilities (loans, available-for-sale assets, debt securities in issue).

Term financial instruments comprise interest rate, currency and forward exchange swaps. They are valued with a method referring to valuation techniques using observable parameters.

Following the application of IFRS 13 “Fair value measurement” the CEB adjusted its valuation methods related to:
- credit risk of the counterparty within the fair value of derivative financial assets (Credit Valuation Adjustment – CVA);
- its own credit risk within the valuation of derivative financial liabilities (Debit Valuation Adjustment – DVA);
- its own credit risk within the valuation of debt securities in issue (Own Credit Adjustment – OCA).

At 31 December 2016, the CEB recorded a fair value adjustment of derivative instruments in the amount of € 959 thousand under assets for the DVA (31 December 2015: € 898 thousand) and of € 1 339 thousand under liabilities for the CVA (31 December 2015: € 1 478 thousand). These adjustments are recorded by counterparty of income statement. None of the debt securities in issue being accounted for at market value, the OCA amount equals to zero.

The following table represents the fair value of these financial instruments.

None of the securities classified under the available-for-sale financial assets or financial assets held to maturity categories has been pledged in 2016 and 2015.
NOTE E - Market value measurement of financial instruments

Following the application of IFRS 13 "Fair value measurement" the CEB adjusted its risk valuation methods by including counterparty risk (CVA) and its own credit risk (DVA and OCA), as mentioned in Note C.

The Bank's financial assets and liabilities are grouped in a three-level hierarchy reflecting the reliability of their valuation basis.

Level 1: liquid assets and liabilities as well as financial instruments with quoted price in active markets.

Level 2: financial instruments measured using valuation techniques based on observable parameters.

Level 3: financial instruments measured using valuation techniques that include unobservable parameters. This level includes:

- debt securities in issue containing embedded derivatives in level 3, for which there is no market price available. They were valued at par.
- derivative instruments covering structured issues whose valuation requires complex models and is notably sensitive to unobservable market data.
- loans whose conditions for disbursements are equivalent to those applied by other supranational financial institutions. Given its preferred creditor status, the Bank does not sell this type of receivables. Furthermore, changes in market rates have very little impact on the fair value of these operations as the majority of loans are at variable interest rate (including hedging transactions). The Bank therefore estimates that the fair value of these assets corresponds to their net carrying value.

Financial instruments, measured at their fair values, are presented in the table below:

NOTE F - Offsetting financial assets and financial liabilities

At 31 December 2016, no operation was subject to offsetting in the balance sheet of the CEB. The Bank has no offsetting agreements meeting the criteria of the amendment to IAS 32.

The following table presents net amounts of financial assets and liabilities, as well as their net amounts after taking into account transactions under framework agreements (cash deposits or securities received under collateral agreements on swaps and loans), as required by the amendment to IFRS 7.

(*) All accounting elements (receivables and provisions) of the counterparty concerned were written-off in 2016.

At 31 December 2016, loans are guaranteed up to the amount of € 6.2 billion (31 December 2015: € 5.9 billion). These guarantees could be either in the form of securities or signed commitments.
### Loans outstanding and financing commitments by country

(1) The Bank benefits from guarantees in the form of deposits or securities in relation to collateralisation contracts. As at 31 December 2016, the CEB received € 1.4 billion of guarantees in form of deposits (31 December 2015: € 1.7 billion) and € 977.7 million in form of securities (31 December 2015: € 972.5 million).
**NOTE J - Amounts owed to credit institutions and to customers and debt securities in issue**

### Development of customers' interest-bearing accounts

Within the framework of numerous bilateral and multilateral contribution agreements signed with donors, the CEB receives contributions in order to finance, through grants, activities in line with its objectives. The contributions received from donors are deposited on accounts opened in the CEB’s books.

In general, most of the contributions are provided by member states of the CEB and the European Union.

The Bank fulfils a role of account manager. As such, it processes and records the movements affecting the accounts and controls the available balances. Within the framework of these activities, the CEB may receive management fees.

The CEB is not exposed to credit risk on these accounts since it does not commit itself to provide a grant to a beneficiary without having first received a contribution commitment from one or more donors.

As at 31 December 2016, the Bank managed 35 interest-bearing accounts (2015: 39) with a total balance of € 85.2 million (2015: € 129.8 million). The resources on these accounts amount to € 349.4 million (2015: € 388.6 million) while disbursements stand at € 264.2 million (2015: € 258.7 million).

The table below provides a summary of the movements and commitments on the accounts administered by the CEB distributed according to two categories:

- Programmes/Instruments funded by donor countries,
- Programmes/Instruments funded entirely or mainly by the European Union.

NOTE K - Social Dividend Account

The SDA is used to finance four types of grants:

- interest rate subsidies on loans granted by the Bank,
- guarantees to support the Bank’s financing of high social impact projects,
- technical assistance within the framework of projects financed by the CEB,
- grant contributions.

Grants financed by the SDA are approved by the Administrative Council of the Bank, except technical assistance grants smaller than or equal to € 300 thousand, which are approved by the Governor.

Grants can be up to € 2 million each, with the exception of grant contributions which are limited to € 500 thousand. Annual approvals per country, all windows combined, cannot exceed 10% of SDA resources available for approval.

At 31 December 2016, the breakdown of these sub-accounts is the following:

<table>
<thead>
<tr>

Funding

The SDA can be funded by:

a) contributions received from CEB’s member states through dividends of a social nature, when the Bank’s annual profit is allocated

b) voluntary contributions from the Bank’s member states, upon approval by the Administrative Council

c) voluntary contributions from Council of Europe member states and from non-member states or international institutions, upon approval by the Governing Board and the Administrative Council.

In 2016, member states allocated € 7 million to the SDA out of the previous year’s profit. The funds were allocated as follows: € 3 million to the Loan guarantees window, € 3 million to the Grant contributions window and € 1 million to the Technical Assistance window.
NOTE L - Provisions

The Bank administers a pension scheme and other post-employment benefits concerning a health care scheme, a fiscal adjustment scheme and a termination of service scheme. The amount of the commitment in relation to each post-employment benefit is determined separately using the projected unit credit actuarial valuation method. The last actuarial valuation was carried out on 31 December 2016 based on individual data as at 30 June 2016.

The following is the financial situation with respect the post-employment benefits:

<table>

### Sensitivity test

The table below provides information on the sensitivity of the commitment (Projected Benefit Obligation - PBO) in respect of the post-employment benefits as evaluated at 31 December 2016, as well as the service cost, the interest cost and the estimated benefits for the year 2017, calculated based on a change of the discount rate assumption of +/- 0.25%:

<table>
<thead>
<tr>
<th>Pension scheme</th>
<th>PBO 31/12/2016</th>
<th>Service cost 2017</th>
<th>Interest cost on PBO 2017</th>
<th>Estimated benefits 2017</th>
<th>PBO 31/12/2017</th>
</tr>
</thead>
<tbody>
<tr>
<td>Discount rate +0.25%</td>
<td>186 729</td>
<td>9 719</td>
<td>4 163</td>
<td>(3 423)</td>
<td>197 188</td>
</tr>
<tr>
<td>Discount rate -0.25%</td>
<td>208 164</td>
<td>11 107</td>
<td>3 613</td>
<td>(3 423)</td>
<td>219 461</td>
</tr>
</tbody>
</table>

At 31 December 2016, an increase in the discount rate of 0.25% would have resulted in a decrease of the pension commitment of 5.2%. A 0.25% decrease in the discount rate would have resulted in an increase of this commitment of 5.6% at that date.

<table>
<thead>
<tr>
<th>Other post-employment benefits</th>
<th>PBO 31/12/2016</th>
<th>Service cost 2017</th>
<th>Interest cost on PBO 2017</th>
<th>Estimated benefits 2017</th>
<th>PBO 31/12/2017</th>
</tr>
</thead>
<tbody>
<tr>
<td>Discount rate +0.25%</td>
<td>33 727</td>
<td>1 906</td>
<td>749</td>
<td>(854)</td>
<td>35 528</td>
</tr>
<tr>
<td>Discount rate -0.25%</td>
<td>37 857</td>
<td>2 199</td>
<td>655</td>
<td>(854)</td>
<td>39 857</td>
</tr>
</tbody>
</table>

At 31 December 2016, an increase in the discount rate of 0.25% would have resulted in a decrease of the commitment relating to other post-employment benefits of 5.6%. A 0.25% decrease in the discount rate would have resulted in an increase of this commitment of 6.0% at that date.

### NOTE M - Capital

#### Capital management

In conformity with its Articles of Agreement (Article III), any European State (member or non-member state of the Council of Europe) and any international institution with a European focus may, upon the conditions established by the Governing Board, become a member of the Bank.

The Bank issues participating certificates denominated in euros to which members subscribe. Each certificate has the same nominal value of € 1 000.

The accession procedures consist in addressing a declaration to the Secretary General of the Council of Europe stating that the applicant endorses the Bank’s Articles of Agreement and subscribes the number of participating certificates fixed in agreement with the Governing Board. Any state becoming a member of the Bank shall confirm in its declaration its intention:

- to accede at the earliest opportunity, to the Third Protocol to the General Agreement on Privileges and Immunities of the Council of Europe;
- pending such accession, to apply the legal arrangements resulting from the Protocol to the property, assets and operations of the Bank and to grant to the organs and staff of the Bank the legal status resulting from the Protocol (Articles of Agreement, Article III).

The Governing Board establishes the provisions for the subscription and paying in of capital as well as provisions regarding any capital increase. The terms and conditions for the potential withdrawal of a member state are defined in the CEB’s Articles of Agreement (Article XV). The Bank has never received such kind of request. Based on this and according to IAS 32 as amended in February 2008, the participating certificates are classified as equity instruments.

The subscription to the Bank’s capital and reserves shall be calculated based on the contribution rate of the applicant countries to the budget of the Partial Agreement of the Council of Europe on the CEB.

The Bank’s subscribed capital is composed of paid-in capital and callable capital. The paid-in capital is the portion of the capital to be paid at the accession to the Bank upon the Governing Board’s decision following a proposal by the Administrative Council. Since its inception, the Bank has never withdrawn any subscribed capital.

The Bank’s capital adequacy in terms of risks linked to its operations is assessed through a prudential framework organised around various ratios (see chapter 4 in note B).
Capital breakdown by member state is presented below:

</table>

The earnings per participating certificate for 2016 amount to € 19.17 (€ 23.21 for 2015).
NOTE N - Interest margin

Income and expenses are accounted for in accordance with the effective interest rate method (interest, commissions and charges). Changes in value calculated exclusive of accrued interest on financial instruments are accounted for under “Net gains or losses from financial instruments at fair value through profit or loss” (Note P).

Interest income and expenses from fair value hedging derivatives are shown with the income and expenses arising from those items for which they provide risk coverage.

In thousand euros
NOTE O - Segment information

The CEB is a multilateral development bank with a social vocation. It grants loans to finance projects in its member states. This activity is funded by public issues and private placements.

Within this ambit, the Bank holds a single operational field of activity. It intervenes in geographical areas where its contribution is most needed, particularly in central and eastern European countries, which constitute the target countries.

Its activity of project financing is conducted exclusively in Europe. However, for other financial operations, in particular its public issues, the CEB operates in Europe as well as in other continents. Therefore, these operations are not shown in the table below.

The interest on loans is broken down by borrowers’ country location as follows:

<table>

At 31 December 2016, the Bank staff was composed of: 3 appointed officials (Governor and Vice-Governors) and 197 professional staff. At 31 December 2015: 3 appointed officials (Governor and Vice-Governors) and 193 professional staff.

NOTE R - Cost of risk

The cost of risk includes the impairment charge for inherent credit risk in the Bank’s activity.

In 2016, the CEB did not record any new depreciation, as in 2015.

All receivables with one counterparty, entirely depreciated in 2008, were written-off in 2016. An amount of € 93 thousand was recovered and recorded in cost of risk.

NOTE S - Post-balance sheet events

No material events that would require disclosure or adjustment to these financial statements occurred between 31 December 2016 and the closing date of the accounts by the Governor on 27 February 2017.

External Auditors’ Report on the Financial Statements

Period ending 31 December 2016

To the Members of the Governing Board and Administrative Council of the Council of Europe Development Bank (CEB),

A - Opinion

We have audited the accompanying financial statements of the Council of Europe Development Bank (“the Bank”) which comprise the balance sheet as at 31 December 2016 and the income statement, the statement of comprehensive income, the statement of changes in equity and the statement of cash flows for the year then ended, and a summary of significant accounting policies and other explanatory notes as set out in notes A to S.

In our opinion, the accompanying financial statements present fairly, in all material respects, the financial position of the Bank as at 31 December 2016, and its financial performance and its cash flows for the year then ended in accordance with International Financial Reporting Standards (IFRS) as adopted for use by the European Union.

B - Basis for Opinion

We conducted our audit in accordance with International Standards on Auditing (ISAs). Our responsibilities under those standards are further described in the Auditors’ Responsibilities for the Audit of the Financial Statements section of our report. We are independent of the Bank in accordance with the ethical requirements that are relevant to our audit of the financial statements in France, and we have fulfilled our other ethical responsibilities in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.
C - Key Audit Matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the financial statements of the current period. These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

C1 - Impairment of loans

Refer to note A 2.4 and note B 1 to the financial statements

The key audit matter:

The impairment of loans is estimated by management on the basis of key financial indicators and through the exercise of judgement and assumptions.

Due to the significance of loans and the related estimation uncertainty, this is considered a key audit matter.

How the matter was addressed in our audit

We assessed the Bank's process of credit risk monitoring. We inspected the credit risk documentation (quarterly report on risk management) to evaluate whether credit risk is monitored appropriately.

C2 - Valuation of Available-for-sale financial assets and derivatives

Refer to note A 2.4, A 2.6 and E to the financial statements

The key audit matter

The determination of the value of financial instruments at fair value and of their possible impairment requires the application of valuation techniques which often involve the exercise of judgement by management and the use of assumptions and estimates.

Due to the significance of those financial instruments and the related estimation uncertainty, this is considered a key audit matter.

How the matter was addressed in our audit

We assessed the Bank’s process related to the determination of the fair value of bonds available for sale, interest-rate swaps and currency-rate swaps, and the methodology implemented by the Bank to check market prices in liquid markets or to model fair valuation.

PB-17-1-07 - Period ending 31 December 2016
We compared the valuation of fair values for bonds available for sale to market prices available and assessed their classification according to the three levels of fair value at year end.

Using specific thresholds, we analyzed individual bonds available for sale, with a loss in value at year end compared to the purchase price, in order to assess whether additional impairment was necessary.

We compared the valuation of swaps to external information prepared by the counterparties. We also assessed whether swaps not recognized as hedges had been correctly valued at fair value through profit and loss.

C3 - IT systems and related internal controls over financial reporting:

The key audit matter

The Bank’s financial reporting systems are heavily dependent on complex IT systems and related internal controls. Due to the risk that those internal controls may not be designed, implemented or operating effectively, this is considered a key audit matter.

How the matter was addressed in our audit

We carried out an assessment of the internal controls over the IT Systems relevant to financial reporting. This assessment included updating our understanding of the IT strategy and the organization of the IT department, updating our understanding of the application landscape of the Bank’s IT Systems relevant to financial reporting and performing tests of design and operating effectiveness of key IT General Controls for the Core Integrated Banking System (general accounting and financial projects) on access to programs and data, program change management and computer operations.

D - Other Information

Management is responsible for the other information. The other information comprises the Key Figures and the Financial Summary included in the Financial Report, but does not include the financial statements and our auditors’ report thereon, which we obtained prior to the date of this auditors’ report, and the Report of the Governor (excluding the Key Figures and the Financial Summary), which is expected to be made available to us after that date.

Our opinion on the financial statements does not cover the other information and we do not and will not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information identified above and, in doing so, consider whether the other
information is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated.

If, based on the work we have performed on the other information that we have obtained prior to the date of this auditors’ report, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

When we read the Report of the Governor (excluding the Key Figures and the Financial Summary), if we conclude that there is a material misstatement therein, we are required to communicate the matter to those charged with governance.

E - Responsibilities of Management and Those Charged with Governance for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with IFRS as adopted for use by the European Union, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Bank’s ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Bank or to cease operations, or has no realistic alternative but to do so.

Those charged with governance are responsible for overseeing the Bank’s financial reporting process.

F - Auditors’ Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditors’ report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

PB-17-1-07 - Period ending 31 December 2016
As part of an audit in accordance with ISAs, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity’s internal control.

- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.

- Conclude on the appropriateness of management’s use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Bank’s ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditors’ report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditors’ report. However, future events or conditions may cause the Bank to cease to continue as a going concern.

- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.
From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditors' report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

PB-17-1-07 - Period ending 31 December 2016
Auditing Board’s report

Auditing Board’s Report on the balance-sheet and the Income Statement and the Notes to the financial statements for 2016

In pursuance of its terms of reference under Article XII of the Articles of Agreement of the Council of Europe Development Bank and Article I of its Rules of Procedure, the Auditing Board met in Paris in November 2016 for the interim review and from 27 February to 1 March 2017 in order to certify the CEB’s Balance Sheet and Income Statement and the Notes to the financial statements for the year ended 31 December 2016.

Based on Resolution 413 (2014) of the Governing Board on the appointment of the External Auditors KPMG, the External Auditors presented their statement and gave, when needed, evidence in detail of the performance of the audit.

The Auditing Board carried out the review of the CEB’s activities for the year 2016 by:

- Consulting the Governor, the Vice-Governors, the Directors and other pertinent staff;
- Examining the financial statements of the CEB for the year 2016, including the Balance Sheet as at 31 December 2016, the Income Statement and the Notes to the financial statements, which had been prepared by the Accounting Department of the CEB and signed by the Governor on 27 February 2017;
- Consulting the Internal Audit Department and examining its reports;
- Consulting the External Auditor of the CEB and examining his interim report and his long form report for the year 2016;
- Obtaining the opinion signed by the External Auditor on 28 February 2017;
- Obtaining all necessary documents, information and explanations which the Auditing Board deemed necessary. These were readily given by the Governor, the Vice-Governors, the Internal Auditor, the Directors and other pertinent staff.

The Auditing Board certifies, on the basis of the information which was made available to it and to the best of its understanding, that the CEB’s Balance Sheet and Income Statement including the Notes to the financial statements are in agreement with the books and other records and present fairly, in all material respects, the state of the CEB’s affairs as at 31 December 2016 and the results of its operations and its cash flows for the year then ended, in accordance with International Financial Reporting Standards (IFRS) as adopted by the European Union.

Paris, 1 March 2017

Approval of the accounts

Extract from the minutes of the 302nd meeting of the Administrative Council of the CEB

Resolution 1592 (2017)
on the discharge of the Governor and allocation of the net profit for 2016

Paris, 16 March 2017

CA PV/302/2017

The Administrative Council,

Having regard to Article XI, Section 3 of the Bank’s Articles of Agreement,

Having regard to Rule 1, paragraph 2 of the Rules of Procedure of the Administrative Council,

Having taken note of the balance sheet, income statement and notes to the financial statements as at 31 December 2016,

Having taken note of the Governor’s Memorandum “Proposal for the allocation of the net profit for the 2016 financial year” (CA/302/2262/2017) dated 2 March 2017,

Having taken note of the external auditor’s report dated 28 February 2017,

Having taken note of the Auditing Board’s report dated 1 March 2017,

1. recommends that the Governing Board approve the Bank’s annual report, the balance sheet, the income statement and the notes to the financial statements as at 31 December 2016,

2. discharges the Governor from his responsibility for financial management in respect of the financial year 2016,

3. resolves to allocate the entire 2016 net profit, i.e. € 104 926 182, to the general reserve,

4. recommends that the Governing Board approve point 3 above.

Extract from the minutes of the 216th meeting of the Governing Board of the CEB

Resolution 425 (2017)
on the 2016 Financial Year

Paris, 7 April 2017

CD PV/216/2017

The Governing Board,

Having regard to Article IX, Section 3, paragraph 1, litt. e of the Bank’s Articles of Agreement,

Having regard to Rule 5, paragraph 1 of the Governing Board’s Rules of Procedure,

Having regard to the balance sheet, income statement and notes to the financial statements as at 31 December 2016,

Having taken note of the certification by the External Auditor, dated 28 February 2017,

Having regard to the reports of the Bank’s statutory organs, viz:

- the Report of the Governor for the financial year 2016,
- the Auditing Board’s report dated 1 March 2017,

Having regard to Resolution 1592 (2017) of the Administrative Council,

Having heard the Auditing Board,

Decides:

- to approve the Bank’s annual report, accounts and other financial statements for 2016,
- to discharge the Administrative Council from its responsibility for the financial year 2016,
- to endorse point 3 of Resolution 1592 (2017) of the Administrative Council of 16 March 2017, by which the Administrative Council allocated the entire 2016 net profit, i.e. + € 104 926 182, to the general reserve.
Title
Since its creation in 1956, the Bank has been known successively under three different measures. Since 1 November 1999, it is known as the CEB-Council of Europe Development Bank.

Member states
At 31 December 2015, the Bank had 41 member states: Albania, Belgium, Bosnia and Herzegovina, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Georgia, Germany, Greece, Holy See, Hungary, Iceland, Ireland, Italy, Kosovo, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Moldova (Republic of), Montenegro, Netherlands, Norway, Poland, Portugal, Romania, San Marino, Serbia, Slovak Republic, Slovenia, Spain, Sweden, Switzerland, “the former Yugoslav Republic of Macedonia” and Turkey.

Articles of Agreement
The first Articles of Agreement were adopted by the Committee of Ministers of the Council of Europe on 16 April 1956 under Resolution (56)9. New Articles of Agreement, adopted by the Committee of Ministers on 16 June 1993 under Resolution (93)22, came into force on 18 March 1997 following their ratification by all the member states.

Target countries
Albania, Bosnia and Herzegovina, Bulgaria, Croatia, Cyprus, Czech Republic, Estonia, Georgia, Hungary, Kosovo, Latvia, Lithuania, Malta, Moldova (Republic of), Montenegro, Poland, Romania, Serbia, Slovak Republic, Slovenia, “the former Yugoslav Republic of Macedonia” and Turkey.

Project approved
A project that has been submitted to the Administrative Council and approved for funding.

Loan disbursed
A loan that has actually been disbursed to the borrower.

Loan tranche
Loans are disbursed in tranches, depending on the progress of the work, up to the maximum amount approved by the Administrative Council.

Financing commitment
Total amount of signed master agreements to be disbursed and of individual projects (not within master agreements) for which at least one disbursement has already been made.

Social Dividend Account (SDA)
Fund mainly by the earmarked portion of the Bank’s shareholder approved annual results used to finance grants in favour of high social impact projects. These grants may take the form of interest rate subsidies, technical assistance grants, loan guarantees or grant contributions.

Loans outstanding
Total amount of loans disbursed and not yet repaid.

Subscribed capital
Participating certificates issued by the CEB and subscribed by its members.

Called capital
Total capital paid in and to be paid in.

Uncalled capital
Difference between the subscribed capital and the called capital.
